## SAŽETAK

CrossFit je jedan od najpopularnijih fitness programa u svijetu koji raste iz dana u dan. Različite su metode provedbe CrossFit-a kao programa, a jedna od njih je i Level Method (level metoda) koja je zapravo i predmet ovog rada. Cilj rada je istražiti razvoj motoričkih sposobnosti primjenom Level metoda, a što će pokazati i objektivnu procjenu cjelokupnog fitnessa kod rekreativaca u CrossFit-u primjenom petnaest testova koje Level Method nalaže. Istraživanje je provedeno na uzorku od 15 rekreativaca, muškaraca i žena, kronološke dobi od 24 do 36 godina. Ispitanici su mjereni kroz petnaest testova koje Level Method (level metoda) nalaže, a ti testovi jesu: Front squat, Upper body pull, Lactic tolerance, Deadlift, Upper body push, Upper/Lower endurance, Weightlifting, Rings, Squat endurance, Neuro & core endurance, Kettlebell, Flexibility, Running, Rowing i Aerobic Power Intervals. Provedena su dva mjerenja: inicijalno i finalno. Inicijalno mjerenje je provedeno u studenom 2020. godine, a finalno u svibnju 2021. godine. U prosincu 2020. i siječnju 2021. godine nisu provedeni trenažni procesi već su provedeni u veljači, ožujku i travnju 2021. godine. Ispitivanjem su utvrđene pozitivne i očekivane razlike u minimalnim i maksimalnim rezultatima pojedinih testova kroz inicijalno i finalno testiranje, ali i uglavnom pozitivne promjene u rezultatima sveukupne procjene stanja motoričkih sposobnosti i treniranosti rekreativca.

Ključne riječi: Crossfit, level method, inicijalno, finalno, mjerenje, rezultati, motoričke sposobnosti

## SUMMARY

CrossFit is one of the most popular fitness programs in the world and it is growing day by day. There are different methods of implementing CrossFit and one of them is The Level Method which is also subject of this work. The aim of this work is to investigate motor skills development using Level Method, what will also show objective assessment of the overall fitness of recreational athletes in CrossFit applying the fifteen tests required by Level Method. The research was conducted on a sample of 15 recreational athletes aged 24 to 36 years. The subjects were measured in fifteen tests required by the level method and that tests are: Front squat, Upper body pull, Lactic tolerance, Deadlift, Upper body push, Upper/Lower endurance, Weightlifting, Rings, Squat endurance, Neuro & core endurance, Kettlebell, Flexibility, Running, Rowing i Aerobic Power Intervals. Two measurements were performed: initial and final. The initial measurement was conducted in November 2020, and the final in May 2021. In December 2020 and January 2021, no training processes were conducted but were conducted in February, March and April 2021. The examination revealed differences in the minimum and maximum results of individual tests through initial and final testing, but also mostly positive changes in the results of the overall assessment of the state of motor abilities of recreational athletes.

Key words: CrossFit, level method, initial, final, measurements, results, motor, abilities

## 1. UVOD

Rekreacija obuhvaća niz sadržaja korisnih čovjeku, posebno danas kada svatko sa sve većim poteškoćama usklađuje brojne obveze koje nameće izrazito brz životni tempo. Sadržaji rekreacije omogućuju bavljenje svim aktivnostima, i to iz vrlo različitih područja djelatnosti, koje su iznimno korisne i povoljno djeluju na čovjeka sa više aspekata. Rekreacijom se aktiviraju potencijali koji se nisu mogli ostvariti profesionalnim radom kao što su sklonost prema umjetnosti kroz glazbu, slikanje i oblikovanje; kulturnim sadržajima, sportu, tehnici, znanstvenim i obrazovnim sadržajima i sl. Kineziološka rekreacija je primijenjena znanstvena disciplina u području kineziologije koja ustanovljava i definira načine primjene sportsko-rekreacijskih sadržaja i programa tjelesne aktivnosti radi unapređenja ljudskog zdravlja. (Andrijašević, M., 2010.)

<b>FUNKCIJE SPORTSKE REKREACIJE</b>			
<b>Zdravstvena</b>	<b>Socijalna</b>	<b>Ekonomska</b>	<b>Ekološka</b>
-Očuvanje zdravlja -unapređenje zdravlja -prevencija bolesti -rast i razvoj - pozitivne navike -vitalnost starijih -psihološke karakteristike -optimizam	-socijalizacija -prevencija delikvencije -prevencija ovisnosti - humanizacija života - emocionalnost i empatija - kvaliteta slobodnog vremena	- manje bolovanja -osiguravajuća društva -zapošljavanje u privatnom i društvenom sektoru - prihod od programa sportske rekreacije u uslužnim djelatnostima - višestruka aktivnost	- razvoj svijesti o zdravom okolišu - uređenje okoliša - strategija očuvanja okoliša - uređenje prirodnog okoliša za slobodno vrijeme - poticanje aktivnosti u prirodi

*Tablica 1. Pregled funkcija sportske rekreacije u društvu (Andrijašević, M., 2010.)*

Motoričke sposobnosti su sposobnosti koje određuju potencijal osobe u izvođenju motoričkih manifestacija, tj. jednostavnih i složenih voljnih kretnji koje se izvode djelovanjem skeletnog mišićja. (Sekulić, D., Metikoš, D., 2007.)

*Slika 1. Pojednostavljena struktura motoričkih sposobnosti  
(Sekulić, D., Metikoš, D., 2007.)*

Koordinacija ili motorička inteligencija je sposobnost upravljanja pokretima tijela, očituje se brзом i preciznom izvedbom složenih motoričkih zadataka odnosno u što većoj mjeri brзом rješavanju motoričkih problema. Za rješavanje zadataka u kojima se manifestira ova sposobnost bitna je sinkronizacija viših regulacijskih centara živčanog sustava s perifernim dijelovima sustava za kretanje. (Prskalo, I., 2004.)

Agilnost se najjednostavnije definira kao – sposobnost efikasne promjene pravca i/ili smjera kretanja. U nekim sportovima i aktivnostima agilnost je izuzetno bitna komponenta uspjeha. To prvenstveno stoga što neki sportovi (tenis, borilački sportovi, rukomet..) zahtijevaju od sportaša efikasno i brзо kretanje pri čemu se mijenja i brzina, smjer i / ili pravac kretanja. (Prskalo, I., 2004.)

Brzina je definirana kao sposobnost brzog reagiranja i izvođenja jednog ili više pokreta te kretanje tijela u prostoru, koja se ogleda u savladavanju što dužeg puta u što kraćem vremenu odnosno za najkraće vrijeme u danim uvjetima. (Findak, V., Prskalo, I., 2004.) Osnovni oblici brzine su: (1) brzine reakcije, (2) brzina pojedinačnog pokreta, (3) brzina repetitivnih pokreta i (4) brzina lokomocije. Važne pretpostavke za postizanje brzine kretanja su: morfološke značajke, visoka aktivnost živčano-mišićnog sustava, gipkost i sposobnost opuštanja mišića, kvaliteta tehnike motoričkog gibanja, biokemijske osobine na periferiji lokomotornog sustava te tempo korištenja energetskih tvari. Brzina je sposobnost s relativno visokim stupnjem urođenosti i na nju se može djelovati samo u određenoj razvojnoj dobi. (Prskalo, I., 2004.)

Ravnoteža je sposobnost održavanja ravnotežnog položaja uz analizu informacija o položaju tijela koje dolaze putem kinestetičkih i vidnih receptora. Inače, ravnoteža je sposobnost koja je evidentno od velikog značaja za motoričko funkcioniranje ljudi. Ako se sposobnost ravnoteže promatra nešto detaljnije, postoje dva segmenta ili dva podfaktora ukupne ravnotežne sposobnosti i to : (1) ravnoteža otvorenim očima i (2) ravnoteža zatvorenim očima. (Sekulić, D., Metikoš, D., 2007.)

Preciznost je sposobnost efikasnog pogađanja vanjskog objekta vođenim i/ili izbačenim projektilom. Razlikujemo dvije manifestacije preciznosti: (1) preciznost ciljanjem vođenim projektilom i (2) preciznost gađanjem izbačenim projektilom. Pod preciznošću je uvijek podrazumijevamo sposobnost da se nešto „pogodi“. Pri tome je moguće da se preciznost manifestira na način da se objekt kojim se cilja vodi (nosi) od početka do kraja – dakle do trenutka kontakta s „ciljnim objektom“. Drugi faktor preciznosti je- preciznost gađanjem ili preciznost izbačenim projektilom. Ova preciznost manifestira se u slučajevima kada osoba samo djelomično upravlja projektilom kojim obavlja gađanje. (Sekulić, D., Metikoš, D., 2007.)

Fleksibilnost je sposobnost postizanja maksimalne amplitude voljnih kretnji u jednom ili više zglobova. Fleksibilnost definiraju tri parametra: (1)građa zgloba (2) ligamentozne strukture oko pojedinog zgloba (3) muskulatura. U pravilu, treningom se može utjecati samo na treći parametar. Povećanjem gibljivosti poboljšava se ukupna motorička efikasnost i na viši se stupanj podiže stabilnost lokomotornog sustava. (Prskalo, I. 2004.)

Snaga je rad obavljen u jedinici vremena odnosno količina energije potrošena u jedinici vremena. (Prskalo, I., 2004.) Eksplozivna snaga je sposobnost apsolutne eksitacije maksimalnog broja mišićnih jedinica u jedinici vremena, u kretnji koja je određena potrebom za jednokratnim davanjem ubrzanja vlastitom tijelu ili vanjskom objektu, a što rezultira

efikasnim savladavanjem prostorne udaljenosti. Repetitivna snaga je sposobnost ponovljene ekscitacije mišićnih jedinica, a koja je određena medijalnim i submaksimalnim opterećenjem, te koja se manifestira ponavljanjem određene kretnje. Statička snaga je sposobnost održavanja ekscitacije mišićnih jedinica, što u konačnici omogućava zadržavanje položaja koji je zauzet aktivacijom mišićnih jedinica. (Sekulić, D., Metikoš, D., 2007.)

Izdržljivost je sposobnost obavljanja aktivnosti duže vremena bez sniženja razine njene efikasnosti. Sniženje efikasnosti rezultata je umora koji se može odrediti kao stanje organizma koje nastaje zbog dugotrajnog i napornog rada, a karakterizira ga smanjenje radne sposobnosti. (Prskalo, I., 2004.).

Prema službenim stranicama ([www.crossfit.com](http://www.crossfit.com)) CrossFit je prepoznat kao jedan od najbrže rastućih načina funkcionalnog treninga visokog intenziteta. Trening dana u CrossFit-u zove se WOD (workout of the day) i uključuje rad na 10 razina fizičke pripremljenosti: kardiovaskularna i respiratorna izdržljivost, opća izdržljivost, snaga, fleksibilnost, jakost, brzina, koordinacija, agilnost, ravnoteža, i preciznost. CrossFit kao program osnovao je Greg Glassman u SAD-u 1996. godine i do danas u svijetu postoji više od 15.000 CrossFit boxeva.

*Slika 2. CrossFit box. Izvor:  
[www.crossfit-montlucon.borealis-comunication.com](http://www.crossfit-montlucon.borealis-comunication.com)*

CrossFit je prvenstveno osnovan za obuku vojske, vatrogasaca i policije, ali je postepeno stekao svoju popularnost među civilnim stanovništvom. CrossFit trening sastoji se od različitih vježbi koje pojedincu omogućuju savladavanje različitih fizičkih zadataka, kao i samu pripremu na savladavanje istih. Jedna od glavnih značajki CrossFit treninga je da se

vježbe izvode brzo i ponavljaju se, dok je vrijeme za oporavak između setova ograničeno ili ga uopće nema. Program treninga razlikuje se ovisno o individualnom stanju sportaša. Vježbe se izvode u što kraćem vremenu ili na broj maksimalnih ponavljanja u zadanom vremenu, a mogu se provoditi individualno, u paru ili pak u grupi. Prema posljednjim istraživanjima utvrđeno je kako CrossFit ima pozitivan učinak na izdržljivost, povećani maksimalni aerobni kapacitet, ali i pozitivan učinak na tjelesnu kompoziciju, snagu, fleksibilnost, ravnotežu, BMI, smanjenje potkožnog masnog tkiva i to ne samo u odraslih već i u adolescenata. Osim navedenih pozitivnih učinaka, istraživanja su pokazala i pozitivan učinak na stanje raspoloženja i socijalne aspekte. (Wagener, S., Wilhelm Hoppe, M. i sur., 2020)

Prema službenim crossfit stranicama ([www.crossfit.com](http://www.crossfit.com)) navedeno je kako je metoda CrossFit-a zapravo temeljena na piramidi. Na dnu piramide se nalazi prehrana, a na vrhu piramide sport. Ostali dijelovi piramide jesu metaboličko kondicioniranje, gimnastika i weightlifting. Prehrana koju promovira CrossFit zajednica je zapravo Paleo Prehrana koja se uglavnom sastoji od 40% ugljikohidrata, 30% proteina i 30% masti na dnevnoj bazi. Vožnja biciklom, trčanje, plivanje i slično predstavljaju metaboličko kondicioniranje koje je u piramidi smješteno odmah iznad prehrane. Gimnastika je smještena iznad metaboličkog kondicioniranja, a vrlo je važno napomenuti kako se kod gimnastike ne radi isključivo o elementima sportske gimnastike, već o svim elementima gimnastike koji za cilj imaju kontrolu vlastitog tijela. Iznad gimnastike nalazi se olimpijsko dizanje koje se odnosi na mrtvo dizanje, čučanj, trzaj, nabačaj i izbačaj, a samim treningom olimpijskog dizanja razvija se brzina, jakost, snaga i fleksibilnost. Na samom vrhu piramide nalazi se sport, a što zapravo predstavlja natjecanje u CrossFit-u.

Postoji više načina provođenja CrossFit treninga, a jedan od njih je i level metoda (The Level Method). Prema službenim stranicama ([www.levelmethod.com](http://www.levelmethod.com)) level metoda (the level method) je zapravo sustav temeljen na levelima koji mjeri ukupnu razinu fitnessa individue kroz petnaest različitih kategorija. Dakle, koristeći level metod moguće je precizno i objektivno odrediti u koji level individua pripada prema svojim slabostima, ali i prema onome što mu dobro ide. Po izvršenom testiranju, vježbači se smještaju u različite skupine i to 8 različitih skupina gdje je svaka skupina označena različitom bojom (bijela, žuta, anrančasta, plava, ljubičasta, smeđa, crna i crvena).. Najveća prednost Level methoda je objektivan pogled na trenutne vježbačeve sposobnosti. Svaka kategorija ima svoje individualne levele, a nakon procjene svih kategorija dobije se cjelokupni level. Level metodom se započinje inicijalnim testiranjem kroz 15 kategorija, a te kategorije jesu front squat, upper body pull,

lactic tolerance, rowing, running, deadlift, upper body push, upper/lower endurance, aerobic power intervals, weightlifting, rings i squat endurance, neuro and core endurance, kettlebell i flexibility. Nakon završenog inicijalnog testiranja osoba se svrstava u skupinu (boju) ovisno o rezultatima testiranja, te se testiranje po istim kategorijama ponavlja nakon 4 mjeseca. Cjelokupni level se uglavnom temelji na „najlošijoj“ kategoriji i to po pravilu (+2), pa je najlakši način za napredak taj da se konstantno radi na vježbačevim slabostima.

## 2. DOSADAŠNJA ISTRAŽIVANJA

Berisha M., i Cilli, M. su 2018. godine proveli istraživanje „Examining the effects of CrossFit Workouts on a selection of motor skills“. Istraživanje je provedeno na uzorku od 30 ispitanika od kojih je 15 činilo kontrolnu skupinu, a 15 eksperimentalnu skupinu ispitanika koji su provodili CrossFit trening kroz četiri tjedna. Testovi koji su se koristili za vrijeme istraživanja jesu: pull up-ovi, pushups, 20 meters endurance shuttle run, bent arm hang test, 10x5 meters shuttle run test, standing broad jump, sit ups, maximal aerobic power. Po završetku ispitivanja utvrđen je pozitivan učinak Crossfit treninga na motoričke sposobnosti i to za 25,3% kod eksperimentalne skupine.

Hamdouni, H., Kliszczewicz, B., i sur. su 2021. godine proveli istraživanje „Effects of three fitness programs on strenght, speed, flexibility and muscle power on sedentary subjects“. Cilj istraživanja bio je utvrditi i usporediti Crossfit, Less Mills i tradiciionalni funkcionalni trening u razvoju spomenutih motoričkih sposobnosti. Ispitanici su bili nasumično podijeljeni u tri grupe te je svaka grupa provodila trening pet puta tjedno kroz šesnaest tjedana. Na kraju istraživanja utvrđeno je kako su ispitanici koji su provodili treninge CrossFita i tradicionalnog funkcionalnog treninga ostvarili pozitivne učinke na brzinu i snagu, dok su kod Less Mills programa utvrđeni pozitivni učinci na fleksibilnost.

Cosgrove, S., Crawford, D. su 2019. godine proveli istraživanje „Multiple fitness improvment found afret 6-months of High intensity functional trening“, a kje istraživanje je provedeno na uzorku od 45 ispitanika i to 23 žene i 22 muškarca. Svi ispitanici su prethodno provodili Crossfit treninge od 0 do 27 mjeseci te su ispitanici podijeljeni u grupe po spolu, ali i po iskustvu u crossfitu na način da su jednu grupu činile osobe koje su u CrossFitu od 0-6 mjeseci, a drugu grupu osobe sa +7 mjeseci u crossFitu. Kod grupe žena, ali i muškaraca utvrđeni su značajni pozitivni učinci CrossFit-a na fleksibilnost, snagu i izdržljivost, a koji su se pozitivni učinci naročito ogledali kod grupe žena i muškaraca koji su imali do 6 mjeseci iskustva u CrossFitu.

### **3. CILJ RADA**

Sukladno problematici postavljenoj u ovom istraživanju, cilj je napraviti analizu razvoja motoričkih sposobnosti primjenom Level Method (level metode) programa treninga u rekreativnom CrossFitu. Cilj je, dakle, utvrditi razvoj i razlike u motoričkim sposobnostima primjenjujući Level Method (level metodu) program treninga u rekreativnom CrossFitu, kroz ukupno petnaest (15) testova postavljenih Level Methodom (level metodom) i to kao inicijalno testiranje te testiranje nakon tri mjeseca sustavnog treninga.

## **4. METODE RADA**

### **4.1. UZORAK ISPITANIKA**

U svrhu istraživanja razvoja motoričkih sposobnosti primjenom Level Methoda (level metode) u rekreacijskom CrossFitu korišten je uzorak od 15 rekreativaca, muške i ženske populacije, kronološke dobi od 24 do 36 godina.

### **4.2. UZORAK VARIJABLI**

Testiranja su provedena kroz ukupno petnaest testova koji su postavljeni level metodom, a ti testovi jesu:

1. Front squat
2. Upper body pull
3. Lactic tolerance
4. Deadlift
5. Upper body push
6. Upper/Lower endurance
7. Weightlifting
8. Rings
9. Squat endurance
10. Neuro & core endurance
11. Kettlebel
12. Flexibility
13. Running
14. Rowing
15. Aerobic Power Intervals

Inicijalna testiranja su provedena od 01.-15. studenog 2020. godine, dok su finalna testiranja provedena od 02.-15. svibnja 2021. godine. U prosincu 2020. i siječnju 2021. godine treninzi nisu provedeni obzirom da je odlukom Ministarstva unutarnjih poslova, Ravnateljstva civilne zaštite donesena mjera o obustavi rada fitness centara. Treninzi su se, dakle, provodili kroz veljaču, ožujak i travanj 2021. godine nakon čega su od 02.-15. svibnja 2021. godine napravljena finalna testiranja. Ispitanici su svaki test izvodili samo jednom za vrijeme inicijalnog i jednom za vrijeme finalnog testiranja. Svi ispitanici testirani su pojedinačno.

### 4.3. OPIS TESTOVA

#### 4.3.1. FRONT SQUAT

Front Squat	M	-	I	-	I	II	III
			Goblet squat 12 kg 5 reps	Front squat 20kg 8 reps	Front squat 30kg 8 reps	Front squat 42,5 kg 8 reps

#### 4.4. OPIS EKSPERIMENTALNOG POSTUPKA

Samo istraživanje započeto je inicijalnim testiranjem kroz petnaest prethodno navedenih testova. Po završetku inicijalnog testiranje ispitanici su podvrgnuti trenažnim procesima primjenjujući Level Method (level metodu) program CrossFit treninga slijedeća tri

mjeseca, nakon čega je uslijedilo finalno testiranje. Istraživanje je provedeno na muškoj i ženskoj populaciji, članovima Crossfit boxa „20350 Athletics“, a glavni ciljevi trenažnog procesa bili su: unapređenje motoričkih sposobnosti ispitanika kao i unapređenje cjelokupnog fitnesa ispitanika. Prema level methodu svaki trening se sastojao od nekoliko dijelova i to zagrijavanja, vježbanja tehnike, dnevnog WOD-a te istežanja.

#### **4.5. PRIMJER TJEDNOG MIKROCIKLUSA PRIMJENOM LEVEL METHODODA (LEVEL METODE) U CROSSFITU**

##### **4.5.1. PONEDJELJAK**

###### **WARM UP: (0:00 – 10:00)**

10 Scap pullups

10 Medball squats

20 singleunders

30 sec Tricep & Lat Strech ea/s

###### **PREP: Pullup & Doubleunder (10:00 – 25:00)**

<b>PULLUP</b>	<b>DOUBLEUNDER</b>
a) 15 sec Active Hang	30 sec Singleunder w/DU jump
b) 30 Arch – hollow Swings	30 sec Penguin Jumps
c) 2:00 Pullup practice	30 sec Doubleunder w/ imaginary rope
	2:00 Doubleunder practice

## 5. REZULTATI I RASPRAVA

U nastavku slijede tablični prikazi mjerenja svih petnaest testova primjenom level metode u CrossFitu.

**Tablica 1.** Rezultati minimalne i maksimalne vrijednosti za inicijalno mjerenje grupe ispitanika (MIN- minimalna vrijednost, MAX- maksimalna vrijednost

Varijable	N	MIN	MAX
Front squat	15	-	V
Upper body pull	15	-	-
Lactic tolerance	15	1	2
Deadlift	15	-	2
Upper body push	15	-	-
Upper/lower endurance	15	2	-
Weightlifting	15	1	2
Rings	15	1	1
Squat endurance	15	-	1
Neuro & core endurance	15	1	-
Kettlebel	15	3	-
Flexibility	15	3	3
Running	15	3	-
Rowing	15	2	3
Aerobic power intervals	15	2	-

Rezultati u inicijalnom mjerenju pokazuju kako su ispitanici test prednjeg čučnja napravili u rasponu od levela „žuti ulaz“ do levela „crveni V“. Drugim riječima, ispitanik koji je nalošije napravio test „prednji čučanj“ svrstan je prema Level Methodu u level „žuti ulaz“ napravivši 8 ponavljanja testa prednji čučanj sa opterećenjem od 20 kg dok je najbolji ispitanik svrstan u level „crveni V“ napravivši maksimalno ponavljanje prednjeg čučnja sa opterećenjem od 175 kg. Kod testa „Upper body pull“, najlošiji ispitanik je prema Level Methodu svrstan u level „narančasti ulaz“ zadržavši se 5 sekundi u izdržaju sa bradom preko šipke, dok je najbolji ispitanik svrstan u level „crno ulaz“ napravivši pullup sa opterećenjem od 30% svoje tjelesne težine, odnosno sa dodatnim opterećenjem od 24,6 kg. U testu Lactic tolerance najlošiji rezultat prema Level Methodu bio je ispitanik koji je za svoj rezultat svrstan u level „žuti 1“, doje je najbolji ispitanik prema svom rezultatu svrstan u level „plavo 2“. Prema ostavrenim rezultatima u testu Deadlift najlošiji ispitanik prema Level Methodu svrstan je u level „žuti ulaz“, dok je najbolji ispitanik svrstan u level „crveni 2“. Isto tako , prema rezultatima testa „Upper body push“, najlošiji ispitanik je prema Level Methodu svrstan u level „narančasti ulaz“ , a najbolji ispitanik u level „smeđi ulaz“. Kod testa „upper/lower endurance“, najlošiji ispitanik je prema Level Methodu svrstan u level „žuti 2“, a najbolji ispitanik u level „smeđi 1“. U testu „Weightlifting“ najlošiji ispitanik je prema Level Methodu svrstan u level „žuti 1“, a najbolji u level „crni 1“. Prema ostvarenim rezultatima u testu „Rings“, najlošiji ispitanik prema Level Methodu i svojim ostavrenim rezultatima svrstan je u level „bijeli 1“, a najbolji ispitanik u level „, smeđi 1“. Prema rezultatima u testu „ Squat endurance“, najlošiji ispitanik je prema Level Methodu svrstan u level „plavi ulaz“ , a najbolji ispitanik u level „crni 1“. U testu „Neuro & core endurance“, prema Level Methodu najlošiji ispitanik je prema svojim rezultataima svrstan u level „žuti 1“, a najbolji ispitanik u level „plavi ulaz“. U testu „Kettlebel“, najlošiji ispitanik je prema svojim rezultatima i Level Methodu svrstan u level „žuti 3“, dok je najbolji ispitanik ostvario rezultate koji su ga svrstali u level „crveni ulaz“. Prema Level Methodu, u testu „Flexibility“ ispitanik sa najlošijim rezultatima svrstan je u level „narančasti 3“, dok je ispitanik sa najboljim rezultatima svrstan u level „smeđi 3“. U testu „Running“, najlošiji ispitanik je prema Level Methodu svrstan u level „narančasti 3“, dok je ispitanik sa najboljim rezultatima prema Level Methodu svrstan u level „crveni ulaz“. Prema Level Methodu i rezultatima u testu „Row“, najlošiji ispitanik je prema svojim rezultatima svrstan u level „žuti 2“, dok je najbolji ispitanik svrstan u level „crveni 3“. U testu Aereobic Power intervals, prema Level Methodu najlošji ispitanik svrstan je u level „narančasti 2 , dok je najbolji ispitanik svrstan u level „crveni ulaz“.

**Tablica 2.** Rezultati minimalnih i maksimalnih vrijednosti za finalno mjerenje grupe ispitanika (MIN- minimalna vrijednost, MAX- maksimalna vrijednost)

<b>Varijable</b>	<b>N</b>	<b>MIN</b>	<b>MAX</b>
<b>Front squat</b>	15	2	5
<b>Upper body pull</b>	15	-	-
<b>Lactic tolerance</b>	15	-	1
<b>Deadlift</b>	15	1	5
<b>Upper body push</b>	15	-	1
<b>Upper/lower endurance</b>	15	3	-
<b>Weightlifting</b>	15	-	-
<b>Rings</b>	15	-	2
<b>Squat endurance</b>	15	1	-
<b>Neuro &amp; core endurance</b>	15	-	3
<b>Kettlebel</b>	15	1	1
<b>Flexibility</b>	15	2	3
<b>Running</b>	15	2	1
<b>Rowing</b>	15	2	5
<b>Aerobic power intervals</b>	15	3	1

Po završetku finalnog mjerenja, a koje je provedeno nakon provođenja trojesečnog trenažnog ciklusa prema Level Methodu (level metodi), dobiveni su rezultati koji su usporedivi sa podacima dobivenima inicijalnim mjerenjem.

Usporedbom minimalnih rezultata ispitanika u inicijalnom i finalnom testiranju utvrđeno je kako su u svim testovima bolji minimalni rezultati osim kod testova „upper body pull“ i „rowing“ gdje su najniži rezultati isti i u finalnom testiranju ti rezultati pripadaju u isti level kao i kod inicijalnog testiranja.

Usporedbom najboljih, odnosno maksimalnih vrijednosti utvrđeno je kako su u testovima „prednji čučanj“, „upper body pull“, i „flexibility“ najbolji rezultati jednaki najboljim rezultatima kod inicijalnog testiranja. Isto tako, utvrđeno je kako je najbolji rezultat u testu „upper body push“ lošiji nego li kod inicijalnog testiranja, dok su rezultati u testovima „lactic tolerance“, „deadlift“, „upper/lower endurance“, „weightlifting“, „rings“, „squat endurance“, „neuro and core endurance“, „kettlebell“, „running“, „rowing“ i „aerobic power intervals“ bolji nego li najbolji rezultati kod inicijalnog testiranja.

**Tablica 3.** Rezultati ukupnog levela prema level metodi za ispitanike u inicijalnom i finalnom mjerenju

	UKUPNI LEVEL –inicijalno	UKUPNI LEVEL – finalno
ISPITANIK 1	-	1
ISPITANIK 2	2	3
ISPITANIK 3	3	1
ISPITANIK 4	2	3
ISPITANIK 5	2	2
ISPITANIK 6	2	1
ISPITANIK 7	3	2
ISPITANIK 8	1	1
ISPITANIK 9	2	2
ISPITANIK 10	1	2
ISPITANIK 11	2	1
ISPITANIK 12	2	-
ISPITANIK 13	1	-
ISPITANIK 14	1	1
ISPITANIK 15	2	1

Uzevši u obzir objektivnu procjenu stanja motoričkih sposobnosti i ukupnog fitnesa ispitanika na inicijalnom i finalnom testiranju, za zaključiti je kako je 13 od ukupno 15 ispitanika ostvarilo bolji rezultat, odnosno finalno testiranje ih je svrstalo u viši level ili razinu. Isto tako utvrđeno je kako su ispitanici 9 i 10 zadržali iste levele koje su imali i prilikom inicijalnog

testiranja. Drugim riječima, ispitanik označen rednim brojem 9 je prilikom inicijalnog i finalnog testiranja u testu veslanje ostvario zanemariv napredak koji ga je svrstao u level žuti tri, a vodeći se pravilom level metode (+2), njegov osobni level može biti najveći mogući narančasti jedan. Isti slučaj je i kod ispitanika označenog rednim brojem 9, koji ima najniži osobni level narančasto 0 pa primjenjujući isto pravilo, najveći mogući osobni ukupni level ispitanika broj 10 može biti narančasto dva. Kod obrade rezultata, aritmetička sredina i standardna devijacija nisu utvrđene, a razlog je što bi njihovo utvrđivanje, uzevši u obzir specifičnost testova, označavalo progresku u obradi podataka. Također, što se tiče samog testiranja i trenažnih postupaka koji se odvijaju nakon testiranja, preporuča se da svaki ispitanik odrađuje trening koji mu je određen rezultatima u boji. Dakle, da se svaki ispitanik drži svog levela i ne odrađuje trening predviđen za druge ispitanike van njegovog levela. Ono što sam susresti kroz svoj rad u crossfit box-u „20350 Athletics“ jest da uglavnom ispitanici rade konzultacije sa trenerima o levelu koji je viši od onoga u koji su smješteni testiranjem, što im se naravno ne dozvoljava iako bi oni zadani trening možda i uspjeli završiti kako je i predviđeno. Brojni su razlozi ne udovoljavanja takvim zahtjevima, počevši od onog koji je glavni, a to je prevencija i održavanje zdravstvenog statusa, a drugi je uglavnom umor. Prema Level Methodu (level metodi), sama težina treninga oscilira i to na način da nisu svi treninzi postavljeni kao visoko zahtjevni. Uglavom jesu, ali kroz tjedan kada se provodi ukupno šest treninga, uvijek su najmanje dva treninga usmjerena na poboljšanje tehnike kompleksnih vježbi. Također, poseban naglasak, treneri stavljaju i na fleksibilnost, koja je, laički rečeno omražena u trening velike većine ispitanika, ali je izuzetno bitna kod elementarnih vježbi u CrossFit-u kao što su OHS, Snatch i slično.
